EXPERIENCIE

AximoTech - Spain | Frontend developer | 2023

As a Frontend Developer at Aximo-tech, I specialize in creating and optimizing innovative user interfaces, utilizing a diverse set of technologies such as Astro, React.js, TypeScript, TailwindCSS, Zustand, Playwright, and Storybook. Currently, I lead the development of the company's CRM version 2.0, a project that requires close collaboration with backend and design teams to ensure a seamless and efficient implementation.

Within my key responsibilities, I excel in:

Designing and implementing highly interactive and responsive components, ensuring an exceptional user experience.

Addressing complex interface challenges, such as developing a resizable component that allows dynamically modifying the size, minimizing, and expanding elements, significantly enhancing the flexibility and usability of the CRM.

Adopting agile development practices to iterate quickly and respond to changing project requirements, maintaining constant communication with the backend team and the design department to synchronize functionalities and aesthetics.

Implementing automated tests with Playwright to ensure the reliability and stability of the software across all stages of development.

EDUCATION

CoderHouse – Fullstack Development(MERN)

Jul 2021 - Dec 2022

- Html y Css
- Javascript
- ReactJs
- Backend development – NodeJs

Henry Bootcamp – Fullstack developer(PERN)

May 2023 - Aug 2023

- Full Stack Web Development 700 hours.
